iCS

For over 27 years, iCS Communications has been supplying our customers effective solutions. We are committed to giving our customers the best service possible, giving high level technical expertise with a friendly face.

Why iCS Communications?

ISDN phones lines are being phased out. Forward thinking businesses need not wait until then to update their phone system. They can have access to the ultra-modern and agile SIP solution right now.

iCS Communications has much experience at installing SIP systems and helping clients make the switch from ISDN.

What is SIP?

Session Initiation Protocol (SIP) Trunking is a way of delivering voice services over the Internet. SIP can be supported on the latest IP (Internet Protocol) based phone systems or we can use a SIP Gateway to connect to legacy Private Branch Exchanges (PBX).

SIP Trunks are a scalable and highly flexible solution that enables businesses to streamline communication costs and resources. SIP solutions are very customer centric. They are easy to deploy and come with greater security, resilience and flexibility.

Call iCS Communications today on 0800 9 77 88 99 to find out more about our SIP solution and book a no obligation review to discuss your options.

Features and Benefits:

- Reliability - built-in resilience features ensure fast, effective disaster recovery and business continuity. Voice traffic can be automatically transferred to alternative lines including mobiles in the case of emergency

- Flexibility - SIP offers number flexibility, enabling you to keep existing numbers, even if your office relocates. The service can also be flexed with your business requirements to cover periods of high demand for your service. The same number can be used across multiple sites, making it easier for customers to contact you

- Cost savings - one SIP channel can cost approximately 50% of the ISDN equivalent in rental. FREE calls to UK local, national and mobiles available on certain packages

About iCS Communications
