## Internet security

### **What is internet security?**

Internet security is a branch of computer security specifically related to the internet, often involving browser security, but also network security on a more general level as it applies to other applications or operating systems on a whole.

Its objective is to establish rules and measures to use against attacks over the internet. The internet represents an insecure channel for exchanging information leading to a high risk of intrusion or fraud, such as phishing. Different methods can be used to protect the transfer of data, including encryption.

### **Security offered by iCS**

We can run a complete security audit of your email system, servers, network and computers. Upon doing this we can then recommend, implement and maintain any software or hardware needed.

### **Why choose iCS?**

iCS works with numerous suppliers to bring you the best in security. We offer only the most dedicated and proficient engineers to audit your system and when all is said and done, we are at the end of the phone 24/7, should you ever need us.

**Give us a call today to arrange a security audit of your system**
